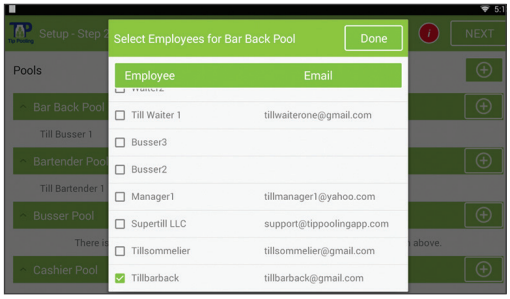
Tip Pooling

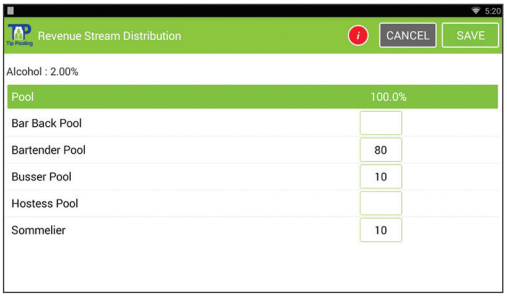
by SuperTill

The Solution for Tip Pooling, Revenue Sharing and Single-Cashier Establishments!

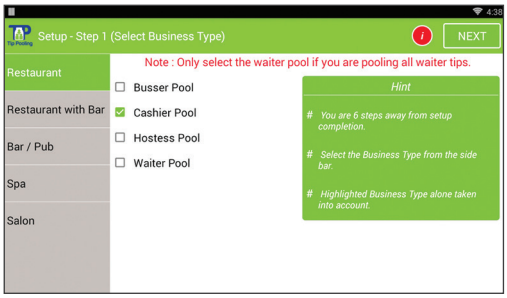
SuperTill's Tip Pooling App brings the sophistication of complex tip pooling, revenue sharing, or single-cashier businesses into the Cloverecosystem. In a few short steps, the Tip Pooling App will easily customize your employee compensation environment to maximize the customer experience. Managers automatically receive a detailed CSV file of all calculated pay for each employee.



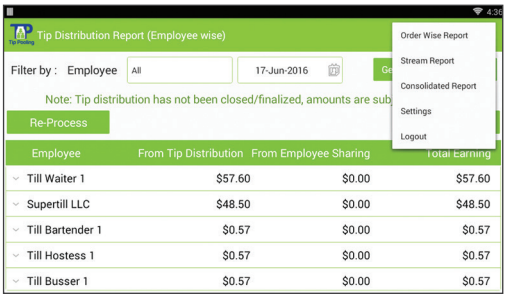
By pressing the "+" button, a Tip Pool is easily set-up by bringing employees into a pool from the data in the Shifts App



In the above example, the business is sharing 2% of liquor revenue with those pools of employees that help promote sales



A Single-Cashier set-up is created by assigning an employee to the Cashier pool. Order-takers will still receive their tips.



All computed tip and revenue-share income data is summarized on screen to be printed and sent by CSV to the admin
